

Seeking patients with heart failure!

THE LEFT VS. LEFT

CARDIAC-RESYNCHRONIZATION
THERAPY (CRT) PROJECT

Join a Patient Advisory Board for people living with heart failure. Participation will involve sharing your experience with heart failure and providing feedback on the study.

Baylor College of Medicine is leading a national clinical trial to compare the effectiveness of two commonly used pacing treatments for heart failure: Biventricular pacing (BiVP) and His bundle pacing or left bundle branch pacing (His/LBBP).

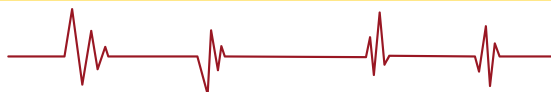

We are looking for people with lived experience with heart failure. We seek people with lived experience with heart failure to be a part of this study to ensure that it is meaningful to patients.

Participation involves joining virtual meetings once a month, sharing your experiences with heart failure, providing feedback on aspects of the study. Please note: You will not be asked or expected to enroll in the clinical trial.

Participation will be compensated.

If you are interested in participating, please e-mail Glenda Estioko at glenda@smithresearchconsultingllc.com by February 28, 2025 to express your interest. In your email, simply indicate your interest and the type of device you have implanted.
